

WAPH - Web Application Programming and Hacking

Instructor: Dr. Phu Phung

Student

Name: Venkata Ramana Rao Devara

Email: devaravo@mail.uc.edu

Repository

Repository URL: <https://github.com/devaravo/devaravo.github.io>.

Professional Webpage

Webpage URL: <https://devaravo.github.io/>.

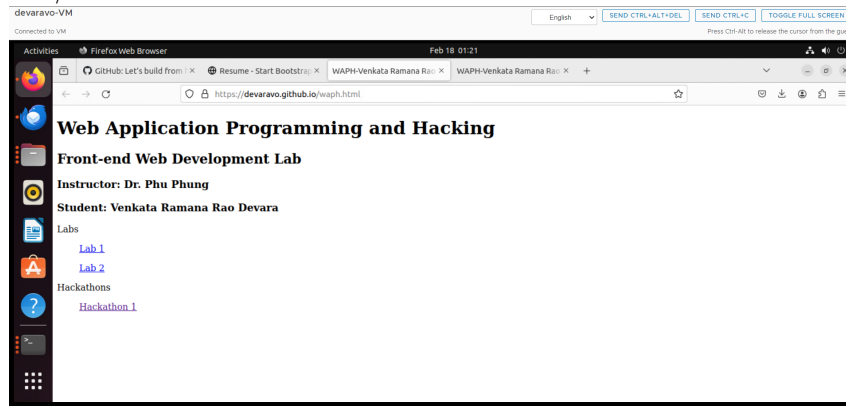

Individual Project 1: Front-end Web Development with a Professional Profile Website on github.io

This project covers building a professional profile webpage using bootstrap and integrating various features such as javascript functionalities, google analytics, integration of web APIs and cookies.

General requirements

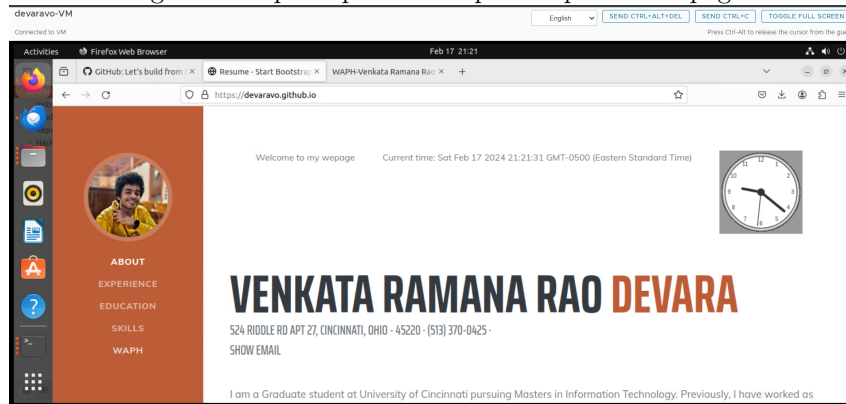

- Created a new public repository `devaravo.github.io`
- Cloned the repository in VM and added `index.html` and `waph.html`
- Built a html profile webpage highlighting my skills, experience and education

- Created a link to waph.html which shows course information and related labs/hackathons etc.

Non-technical requirements

- Used existing Bootstrap template and updated profile webpage

- Created a new account in google analytics
- Included my webpage (devaravo.github.io) in google analytics and started tracking
- Included the code given by google analytics in my index.html (after closing head element)

```
<!-- Google tag (gtag.js) -->
<script
  async
  src="https://www.googletagmanager.com/gtag/js?id=G-ECDL71TG52"
></script>
<script>
  window.dataLayer = window.dataLayer || []
  function gtag() {
    dataLayer.push(arguments)
```

```

}
gtag("js", new Date())

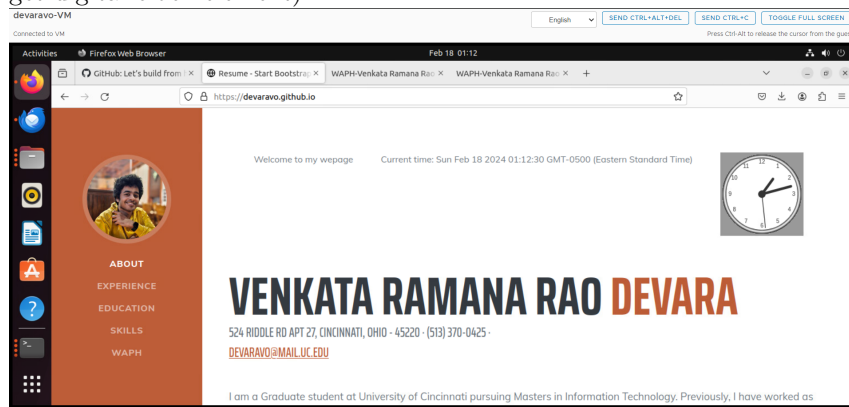

gtag("config", "G-ECDL71TG52")
</script>

```

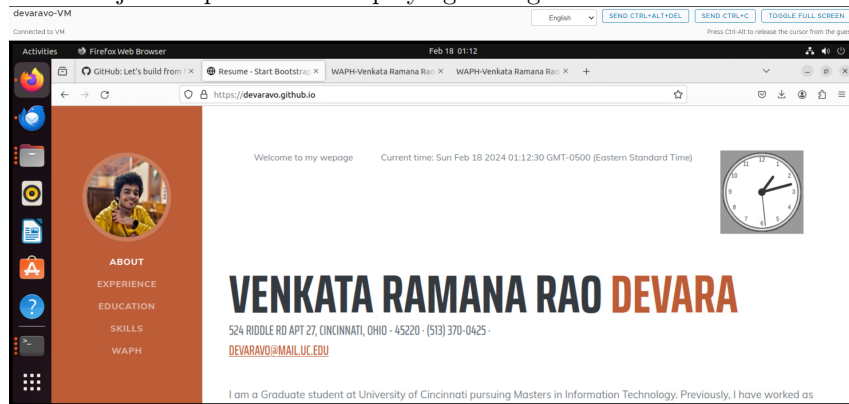

Technical requirements

Basic Javascript code

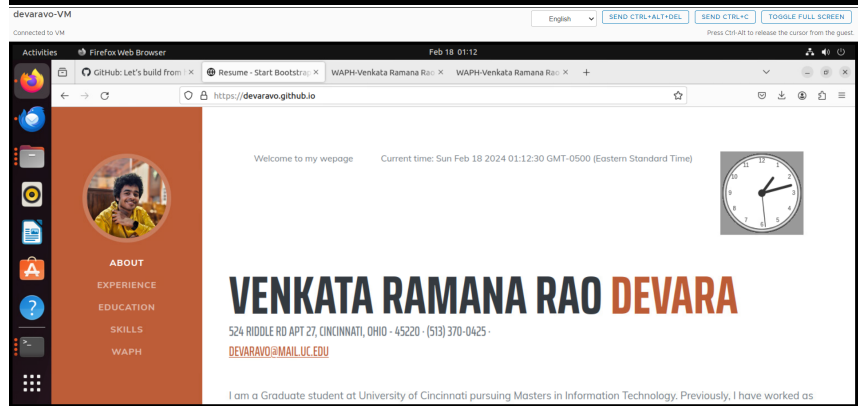

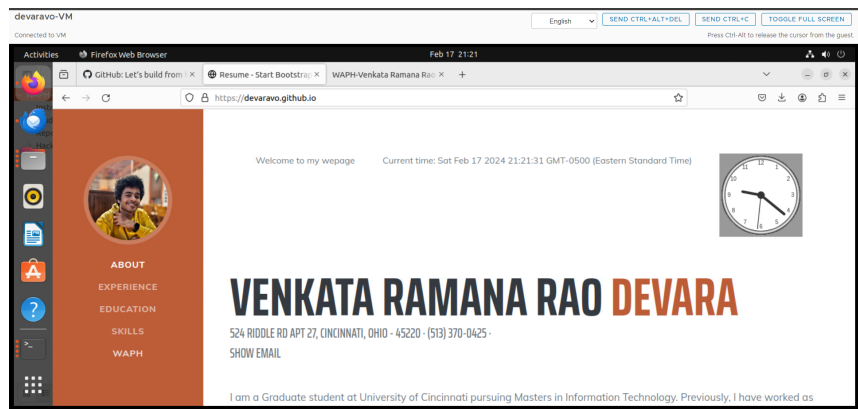

- Included javascript code for displaying digital clock (included jQuery to get digital clock element)

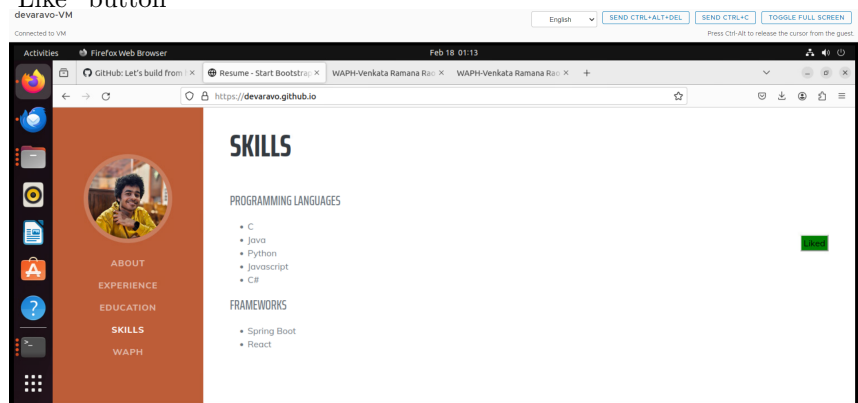

- Included javascript code for displaying analog clock

- Included javascript code to show/hide email

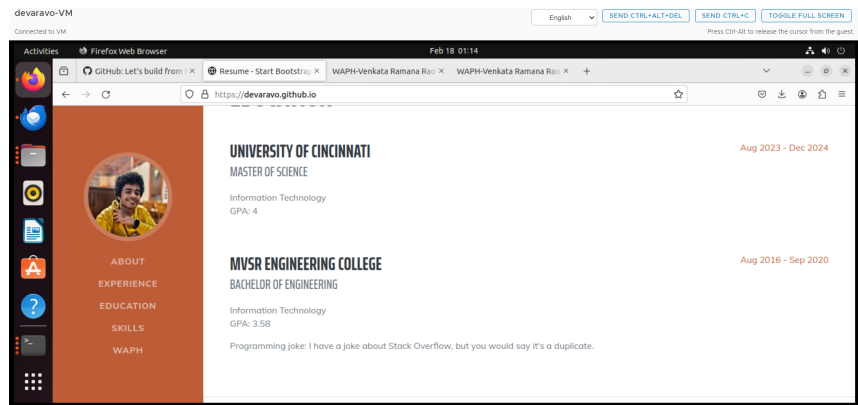

- Added react libraries in index.html and included React code which displays “Like” button

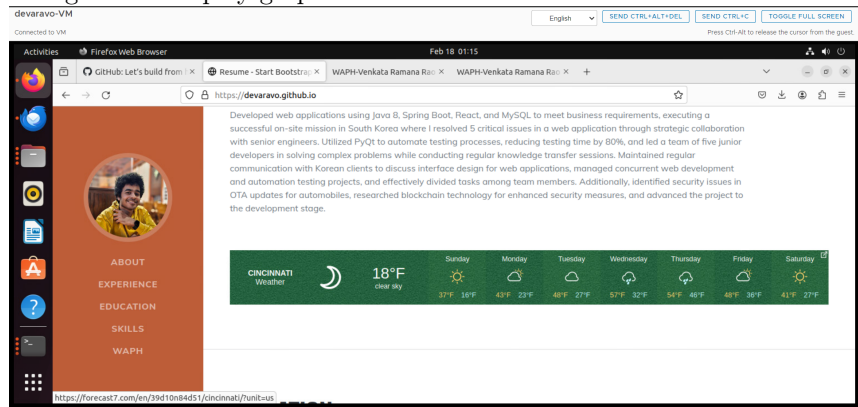

Two public Web APIs integration

- Added joke API and displayed it on webpage using jQuery

- Searched for weather apis on google and added the code given by weathereidget.io to display graphic weather

Javascript cookies

- Added code which uses cookies to display the date/time of user's last visit

```
if (document.cookie.indexOf("username") < 0 ){

$("#lastVisit").html("Welcome to my wepage ")
    document.cookie = "username=user"+"currentTime="+new Date();
}else{
    let cookieString = document.cookie.split("currentTime=")[1].split(";")[0]

$("#lastVisit").html("Welcome back! Your last visit was on "+cookieString);
    document.cookie = "username=user"+"currentTime="+new Date();
}
```
